ROLL-OFF CONTAINER

Mobile service container for high-pressure pipelines.

Efficient, safe, and quick to set up.

Our new mobile service container is based on a converted 20-foot container and offers everything you need for the effective installation of high-pressure pipelines on site – compact, flexible and ready for use.

MOBILE SERVICE CONTAINER
FOR HYDROGEN HIGH-PRESSURE APPLICATIONS

ROLL-OFF CONTAINER

Mobile service container from THEISEN.

Featuring a straightening device and unwinding reel, the system allows pipes of different diameters to be unwound and straightened directly from the coil. This eliminates the need for complex screw connections, thereby increasing the technical tightness of your system. Recurring inspections are also reduced while saving additional material and costs thanks to minimal waste.

Hydrogenial

HYDROGEN SERVICE PARTNER

The system has been tested in accordance with the Operational Safety Ordinance and meets all occupational safety and documentation requirements. This includes complete risk assessments, operating and work instructions.

You can count on efficiency, safety, and quality – directly at your site.

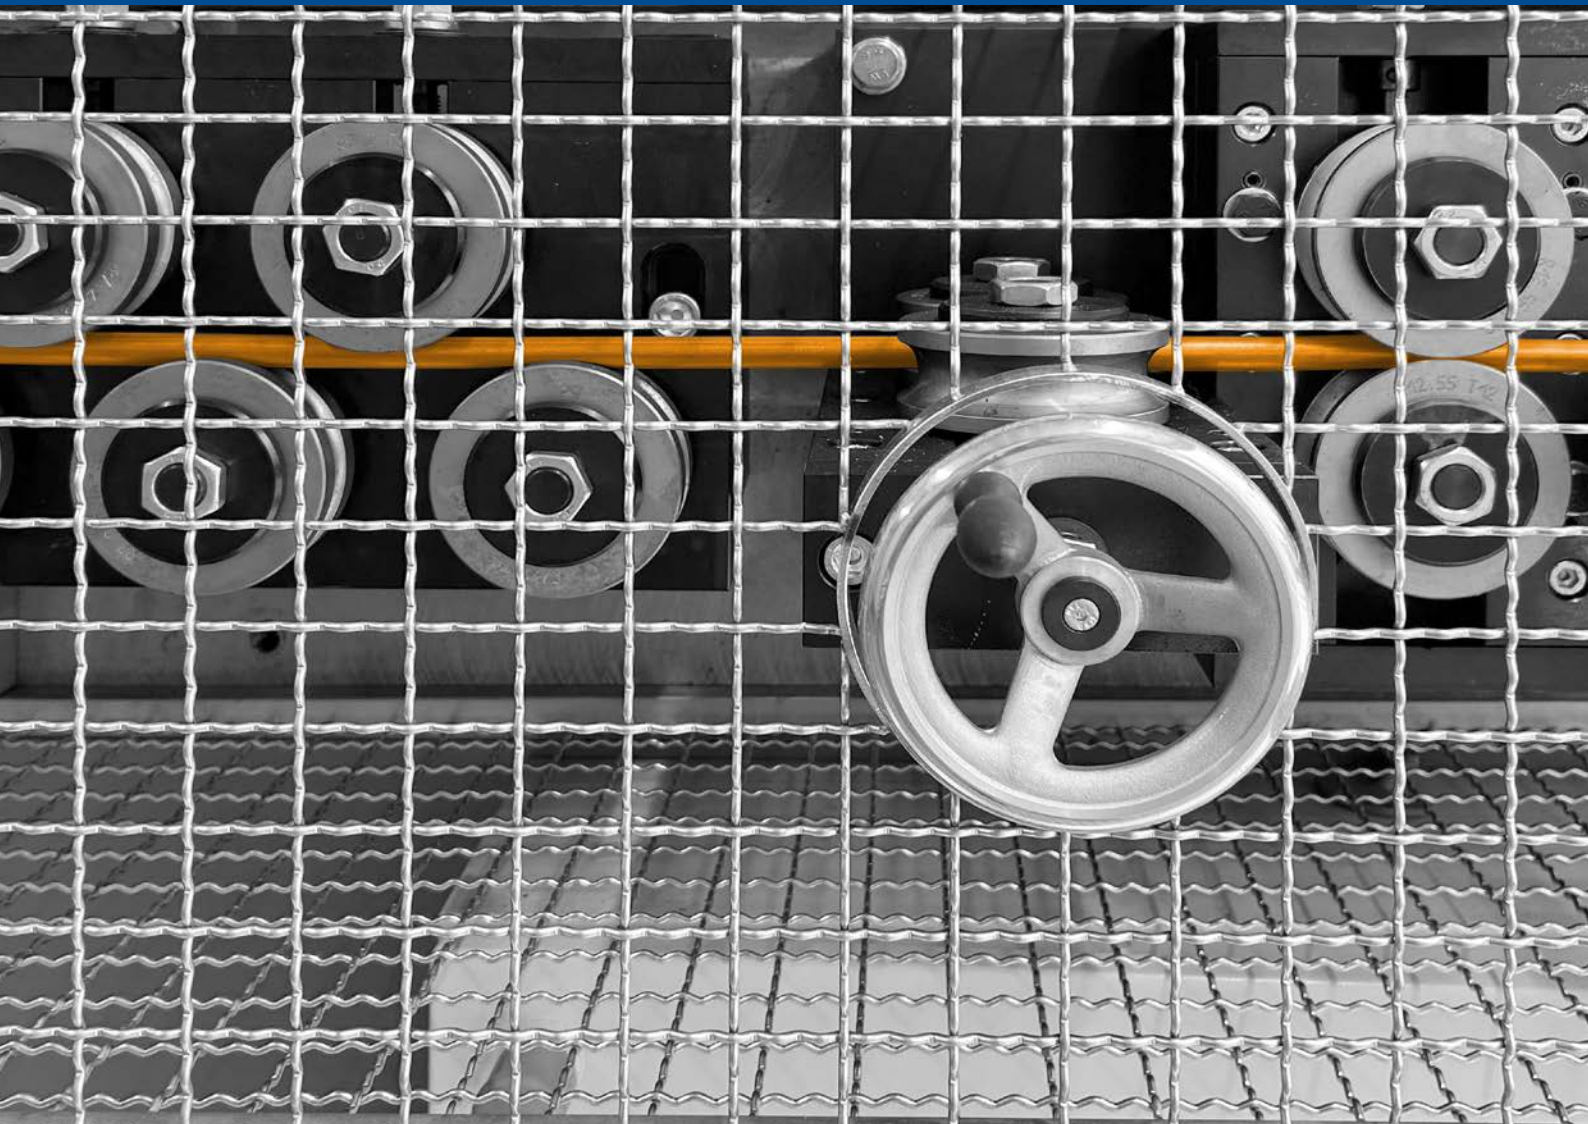

Your benefits at a glance:

- ≡ Delivered ready for use by container truck or swap body
- ≡ Specialist personnel included: Setup, commissioning and professional installation directly on site
- ≡ Pressure test (strength and tightness) after installation included
- ≡ Documentation in accordance with the Pressure Equipment Directive 2014/68/EU
- ≡ Pipe material is provided by us or supplied on request
- ≡ Only requires a construction site power connection / 32 A CEE
- ≡ Ideal for setting up hydrogen filling stations and high-pressure systems up to 1,050 bar
